Product Description
Size: 16 Ounce (Pack of 1)
If you have an infant or toddler, you probably know what diaper rash looks like. Red, bumpy, chafed skin is no fun for babies or their parents! A+D Original Ointment for diaper rash is a smart addition to your collection of baby skincare products. Safe to use at every diaper change, it's easy to apply and gentle on tender bottoms. A+D ointment helps prevent diaper rash by forming a protective barrier to help seal out wetness. It is also useful on your own skin and lips to provide soothing relief to chapped and chafed skin. Indications: Stop Use Indications: This product is for external use only. When using this product do not get it in your eyes. Stop use and ask a doctor if the condition worsens, symptoms last more than 7 days, or symptoms clear up and occur again within a few days. Do not use A+D on deep or puncture wounds, animal bites, or serious burns. Keep out of reach of children. If swallowed, get medical help or contact a Poison Control Center right away. Health Concern: A+D helps treat and prevent diaper rash. It helps temporarily protect minor cuts, scrapes, and burns. A+D temporarily protects and helps relieve chapped or cracked skin and lips. A+D protects chafed skin due to diaper rash and helps seal out wetness.

Everything You Need to Know About Diaper Rash

<p>What is diaper rash?</p> <p>Diaper rash is easy to spot and easy to treat. It is a red, patchy inflammation found on baby's skin where they wear their diapers. It is caused by wetness and irritation, and affects areas around the buttocks, thighs, and genitals. Babies may feel discomfort and pain from diaper rash as their diapers rub these sensitive areas. Don't worry. Mom, almost all babies get diaper rash from time to time.</p>	<p>What causes diaper rash?</p> <p>Diaper rash is extremely common, but it's easy to prevent and treat with A+D. Diaper rash can be caused by irritation due to bowel movements, diarrhea, and moisture from urine (even the most absorbent diapers leave some wetness behind). Other causes may be not drying the skin thoroughly after a diaper change, diaper chafing/friction, and allergic reaction to ingredients found in diaper wipes, laundry detergent, soap, and lotions.</p>	<p>How can I prevent diaper rash?</p> <p>Help prevent diaper rash by applying a generous layer of A+D Original Ointment on baby's bottom, genital area and the folds of the thighs at every diaper change. Since A+D ointment is available in a tub to keep in the diaper bag, you'll have happy changes ahead, every time.</p>	<p>What if my baby gets diaper rash?</p> <p>A+D Zinc Oxide Cream provides soothing relief and helps treat diaper rash. It is specially formulated with zinc oxide, to help treat and protect your baby's precious skin. A+D Zinc Oxide spreads on easily, providing thorough coverage, and allows skin to heal naturally.</p>

Diaper Rash Causes

<p>Teething</p> <p>Although teething itself doesn't cause diaper rash, the excessive drool that comes from chewing on everything in sight can irritate babies' tummies resulting in diarrhea. Continued contact with irritants like diarrhea can contribute to diaper rash.</p>	<p>Solid Foods</p> <p>Transitioning to solid foods is very exciting for parents and their babies. These new foods and textures can be stimulating for babies, but they can also impact what ends up in their diapers! This can irritate babies' skin and cause diaper rash.</p>	<p>Sleep Changes</p> <p>It's a wonderful thing when babies start sleeping through the night. However, along with that much needed extra sleep comes more exposure to soiled diapers. This, in turn, irritates babies' sensitive skin and can cause diaper rash.</p>
